Lahore Pakistan

# Vision of 1<sup>st</sup> Year

## Business application:

I want to develop a clothing management system like the ones that brands like Khaadi, Outfitters and many others use to market their products. One feature that I'd like to add in my application would be that of being able to rent outfits as well as buy them.

## 2D Game:

I want to develop a shooting game like Berzerk. There's no specific "why" to my choice. I just prefer FPS rather than any other genre.
